

NIST AI RMF VS ISO/IEC 42001 VS ISO/IEC 23894 VS MITRE ATLAS OWASP Top 10 VS CSA MAESTRO VS IEEE 7000 VS Others		
	01 NIST AI RMF 1.0 EXECUTIVES & CISOS	Lifecycle governance for executives and CISOs. Flexible, but pair with OWASP and MITRE for technical depth.
	02 ISO/IEC 42001 GLOBAL COMPLIANCE	Certifiable AI management system for global compliance. Structured, though documentation heavy.
	03 ISO/IEC 23894 RISK MANAGERS	AI risk guidance for risk managers, aligned with ISO 31000. Best paired with ISO 42001.
	04 MITRE ATLAS RED TEAMS & SECOPS	Adversarial tactics and techniques for red teams and SecOps. Strong on threat modeling, pair with governance frameworks.
	05 OWASP Top 10 for LLMs DEVELOPERS	Practical LLM vulnerabilities for developers. Actionable, but supplement for multi-agent systems.
	06 CSA MAESTRO AGENTIC SYSTEMS	Threat modeling for multi-agent and agentic systems. Emerging, best for advanced agentic workflows.
	07 IEEE 7000 Series ETHICISTS & DESIGNERS	Ethical AI design principles for ethicists and designers. Strong on values, lighter on security.
	08 Others — PAI, OECD POLICYMAKERS	High-level principles for policymakers and broad adoption. A solid starting point, not a full framework.

WHERE THEY OVERLAP

Pairings that close the gaps

 NIST AI RMF + OWASP Top 10 + MITRE ATLAS Lifecycle governance gains the technical and adversarial depth it lacks on its own.	 ISO/IEC 42001 + ISO/IEC 23894 A certifiable management system, backed by aligned risk guidance from the same family.
 MITRE ATLAS + NIST / ISO governance Red-team threat modeling, anchored to a governance backbone instead of standing alone.	 OWASP Top 10 + CSA MAESTRO Practical LLM vulnerabilities, extended to cover multi-agent and agentic systems.

Hybrid approaches win. Layer frameworks to close each one's gaps.
